BOTOX COSMETIC/DYSPOURT CONSENT

BOTOX Cosmetic Botulinum Toxin Type A and/or Dysport Botulinum Toxin Type A

Being fully informed about your condition and treatment will help you make the decision whether or not to undergo Botox and/or Dysport Cosmetic treatment. This disclosure is not meant to alarm you; it is simply an effort to better inform you so that you may give or withhold your consent for this treatment.

You should not have Botox if: you are pregnant; nursing; allergic to albumin; have an infection, skin condition, or muscle weakness at the site of the injection; or have Eaton-Lambert syndrome, Lou Gehrig's disease, or myasthenia gravis. I have requested that Sherri Hill-Coidan, FNP and/or the registered nurse under her supervision treat my facial lines and enhance facial shaping with Botox and/or Dysport Cosmetic. These injections have been used for nearly two decades to improve spasms of the muscles around the eye, to correct double vision due to muscle imbalance as well as numerous other neurological uses. Botox and Dysport Cosmetic are approved by the FDA to improve the appearance of the vertical lines between the brows. Injections in other areas to improve appearance of facial lines and for facial shaping have been well documented in the literature, although are considered "off label" uses. The results of Botox and Dysport Cosmetic are usually dramatic, although the practice of medicine is not an exact science and no guarantees can be or have been made concerning expected results. Patient Initials. _____

Botox and Dysport Cosmetic solution is injected with a tiny needle into the skin and muscle. You should see the benefits develop over the next seven days to two weeks, although complete evaluation of the outcome from treatment is evaluated at two weeks. A decreased appearance of frowning or creasing of other lines and/or a change in specific facial grimacing will be the result of this treatment. Patient Initials. _____

The most common side effects are headache, respiratory infection, flu syndrome, temporary eyelid droop and nausea. Botox and Dysport Cosmetic should not be used if there is an infection at the injection site. Additionally, slight temporary bruising may occur at the injection site. I have been advised of the risks involved in such treatment, the expected benefits of such treatment and alternative treatments, including no treatment at all. Patient Initials _____

I understand that the results are temporary and repeat treatments are needed to maintain the desired results. Patient Initials. _____

I agree that this constitutes full disclosure and that it supersedes any previous verbal or written disclosures. I certify that I have read and fully understand the above paragraphs and that I have sufficient opportunity for discussion and to ask questions. I consent to this Botox and/or Dysport Cosmetic treatment today and for all subsequent treatments.
